

AUV supports environmental monitoring, wide area surveys

2009-07-15 13:12:21 by Rons_ROV_Links

Saab has been developing advanced autonomous underwater vehicles (AUVs) and remotely operated vehicles (ROVs) and for more than 30 years. Development of underwater vehicles from Saab has been done in a modular and evolutionary way to create a flexible solution to fit different domains and customers.

An important strategy for the development of these modular vehicles has been to minimise life cycle and ILS costs for the customer. And now the company has just launched a new generation of AUVs to the international oil and gas market the AUV62.
