

Ocean Modules contract awarded for V8 Offshore research platform

2010-09-01 11:00:00 by Rons_ROV_Links

Ocean Modules has been contracted by the Sven Lovén Centre for Marine Sciences at the University of Gothenburg to deliver a complete research platform based on the V8 Offshore remotely operated vehicle (ROV).

The new research platform concept will include many never before seen innovations for sampling, documentation, video mosaic, photography, bathymetric survey and tool use, through clever use of different skids and attachment points.

The platform is based on the revolutionary V8 Offshore with the 360° V8 control system, originally developed for offshore oil and gas survey use. The most recently ordered vehicle will be based at Gothenburg University's Sven Lovén Centre for Marine Sciences, on the west coast of Sweden.

The order also includes a well-equipped V8 Sii with fibre-optic interface.
