

## Tritech sale to NCS Survey

2010-09-24 12:00:00 by Rons\_ROV\_Links

Tritech International, the innovative underwater technology company, has provided high-technology sonars to independent offshore survey company NCS Survey. NCS Survey has purchased a suite of high-performance Tritech sonars to assist in its survey operations. This purchase adds to NCS Survey's growing portfolio of specialist survey and positioning solution services.

Tritech is a leading subsea technology provider and keen to cultivate relationships with similarly technically-led companies.

As part of this commitment to the industry, the company has incorporated industry specialists into its sales team in core subsea sectors of survey, defence, engineering, energy and the interconnecting underwater vehicles market. This enables Tritech to have a dedicated member of staff available for specialist knowledge and advice; such as Matt Winfield, Survey Business Development Manager, who has extensive offshore experience from working with these systems.

Matt comments: "We are pleased to provide our multibeam sonars to NCS Survey and we are sure these additions will enhance their service offering. Furthering relationships with similarly driven companies is key to building our specialist network of technology partners, customers and distributors."

Chris Erni, Commercial Director, NCS Survey comments: "Tritech's high specification multibeam sonars coupled with our advanced 3D visualisation software will enable NCS Survey to offer an enhanced range of cost effective solutions to our clients. The use of these sonars provides us with the ability to offer solutions and services that are unmatched by other systems."
