Seatronics Ltd announces global representative agreement with Zetechtics Limited

Seatronics Limited, an Acteon company, and Zetechtics Limited have signed a global representative agreement for the Jupiter range of subsea ROV intervention control systems and associated products.

The agreement includes the provision of rental equipment that will be held in all Seatronics' locations: Brazil, Singapore, Australia and the UK. In addition to extensive pools of rental equipment, each location will hold a substantial sales stock, thereby offering a flexible and rapid response to all client requirements.

David Currie, managing director, Seatronics says: "Seatronics is a market leader in the rental and sale of marine electronic equipment and continues to offer the finest products and solutions to the subsea services sector. The Zetechtics agreement demonstrates our commitment to widening our portfolio of specialist ROV equipment and will further complement the Seatronics range. Both companies embody the quality-driven, market-leading approach demanded by customers in today's subsea oil, gas and renewables sectors. The global coverage, in-house knowledge and enhanced value-added services that Seatronics can provide will, I am sure, lead to an increased level of interest in the Zetechtics product range."

Tim Overfield, managing director, Zetechtics says: "This agreement provides professional worldwide availability of Jupiter products and services. As a result of the agreement Seatronics and Zetechtics clients can expect enhanced service and support across the entire range of Jupiter products."

For a demonstration or further information about Zetechtics products please contact your local Seatronics base or email – aberdeen@seatronics-group.com
