

Bowtech continue to lead the market in LED lighting solutions

2009-09-15 10:00:00 by Rons_ROV_Links

Bowtech Products have developed their range of AquaVision products further with the release of the LED-3200-AC light. This is the first commercially available 120VAC 50/60Hz light in the AquaVision range. The LED-3200-AC has an auto resetting circuit to prevent accidental overheating of the lamp in air.

The remotely dimmable LED lamp delivers an amazingly bright white 3200 lumens 80° beam which is ideal for colour video inspection or viewing tasks. The latest quad cluster LED technology can be used with either PAL/CCIR or NTSC/EIA cameras operating at 50 or 60Hz generates four times the light output per watt than an incandescent bulb.

The 3000/6000 metre housings are manufactured from hard anodised aluminium, but Titanium and Stainless Steel are options for specialised applications.

The LED-3200-AC is a real alternative to incandescent lighting but without the vulnerability. This light has an effective lifetime of over 100,000 hours but without any fragile filaments, making it extremely robust and highly shock resistant.

- 120VAC 50/60Hz Dimmable
- Long Life (100,000 hours)
- Ultra High Intensity
- 3000/6000 Metre Rating
- Auto Thermal Protection
- Low Operating Cost
