

Seatronics Expands to Macaé, Brazil

2012-05-08 07:50:00 by ginamc

With established bases already in Aberdeen, Abu Dhabi, Houston, Louisiana, Perth and Singapore, this new office supporting the Brazil region, reflects the company's ongoing expansion and increased business from new and existing clients.

The Vice President of USA and Brazil region, Mark Teles who will be leading the Brazil team said:

"We've been fortunate to draw increasing interest from around the world, as more and more of our customers are working in deeper offshore areas and it is essential that we have the equipment they require available worldwide for rental or purchase. With that in mind, we plan to offer rental and sales of marine electronic equipment, in-house repairs and services, calibration and 24hr technical support."

The new office means a faster response time, and will be more accessible to other survey companies in the region. Seatronics have agreements with world leading manufacturers including; CodaOctopus, Valeport, Marine Magnetics, Predator ROV, CI Burton, BlueView, Zetechtics, Tritex NDT, J2 Engineering Services, Oceaneering, Global Marine, Seacon and Bowtech."

With a comprehensive stock of battery packs, connectors, whips / tails, and having already experienced a great deal of business in such a short space of time it is clear that both Brazil and Seatronics will benefit from the new support and service facilities in region.
